of cancer from normal cells that
have acquired chromosomal
instability and telomerase
activity. Human cancer is a
disease of evolutionary progress.
Various genetic mutations are
acquired by the somatic cells
during clonal evolution, leading
to the transformation of normal
cells into cancer cells. It is
believed that chromosomal
instability and telomerase

activation are common genetic hallmarks of human cancer. To determine which one causes first has been the subject of many studies, and the data are still controversial. In this review, we focus on the telomere integrity of cancer
